
OBJECTIVE

Final-year B.Tech Computer Science and Engineering (Data Science) student seeking a Data Visualization / AI & Data Analytics opportunity. Skilled in turning raw, multi-source data into clear, interactive dashboards using Power BI, Tableau, and Python – with hands-on experience across retail, healthcare, and energy domains.

EDUCATION

Bachelor of Technology – Computer Science and Engineering (Data Science) 2023 – 2027
Swarnandhra College of Engineering and Technology, 4th Year
CGPA: 9.11

TECHNICAL SKILLS

- **Programming & Querying:** Python, SQL **Basic Familiarity:** Java, Linux/CLI
- **AI & Machine Learning:** Predictive Modeling, Time-Series Forecasting, Clustering, Anomaly Detection, Hugging Face API
- **Data Analysis & BI:** EDA, Statistical Analysis, Data Cleaning, Power BI, Tableau, Plotly, Excel
- **Libraries & Frameworks:** pandas, NumPy, Statsmodels, Prophet, XGBoost, scikit-learn, Flask, Streamlit
- **Database & Tools:** MySQL, MongoDB, Neo4j, GitHub, Postman, Jupyter Notebook

INTERNSHIP EXPERIENCE

Data Science Intern – Xylofy AI (Virtual) May 2026 – July 2026 [Certificate](#)

- Built end-to-end ML solutions across retail, real estate, and HR domains – sales forecasting, house price prediction, employee attrition – with dashboards and executive-level reporting.

AI & Cloud Intern – Edunet Foundation (AICTE) [Certificate](#)

- Developed a mental health companion chatbot using the Hugging Face API, applying AI and cloud fundamentals to a real-world use case.

Data Analytics Intern – Smartbridge (BI Tools) [Certificate](#)

- Built interactive Tableau and Power BI dashboards across healthcare and energy datasets.

PROJECTS

Sales Forecasting & Demand Intelligence System – Python, Streamlit [GitHub](#)

- Built an end-to-end forecasting system on 4 years of retail sales data (9,800 orders), benchmarking SARIMA, Prophet, and XGBoost (SARIMA: MAPE 14.8%, deployed to production); detected 11 anomalous weeks and segmented products into 5 demand tiers via K-Means + PCA, deployed as a Streamlit dashboard.

Heart Disease Risk Analysis Dashboard – Tableau, Flask [GitHub](#)

- Analyzed 4,500+ patient records to identify heart disease risk factors via interactive Tableau dashboards, extended with a Flask layer for dynamic data serving.

Global Energy Trends Dashboard – Power BI [GitHub](#)

- Built a Power BI dashboard analyzing 7+ years of global energy data using DAX and Power Query, delivering an interactive drill-down report.

Employee Attrition Prediction – Python, scikit-learn [GitHub](#)

- Developed an end-to-end ML model on the IBM HR Analytics dataset (1,470 records), comparing Logistic Regression, Random Forest, and Gradient Boosting to identify key attrition drivers and deliver HR retention recommendations.

CERTIFICATIONS

Neo4j Certified Professional
Data Science Certification
freeCodeCamp – Data Visualization

ACHIEVEMENTS

- **1st Prize** – Technical PPT Presentation on *Agentic AI*, Swarnandhra College of Engineering & Technology – Rs. 1,500 cash prize.
